IT'S BETTER BECAUSE IT'S CANADIAN

Marketing Dairy Products

**Suggestion Is Made That University
Of Saskatchewan Should Estab-
lish Research Foundation**

Commenting on an address by Dr. G. Misner, professor of agricultural economics at Cornell University, before the Milk Producers' Association of Moose Jaw, recently, George H. Williams, president of the United Farmers of Canada, Sas-

"This is in line," the U.F.C. president said, "with a resolution passed by the board of directors of the U.F.C. on June 20, which said: 'That in view of the present unsatisfactory situation in the dairy industry, we

The research foundation to establish a fund for the purpose of carrying on an investigation with a view to ascertaining the best method of marketing dairy products of Saskatchewan, and further that the following organizations be represented on the committee making the investigations—the U.F.C., the Dairy-men's Association, and the Milk Producers' Association. We are not particular as to the inquiry is made by the research Foundation or through the economics department of the university, so long as it is done."

The economic problems of the twentieth century," Mr. Williams continued, "is not a problem of production at all, but a problem of distribution, and every encouragement

Independent and forward sugges-
s from our political economists
ard the solution of the distribu-
question.
At the recent meeting of the

W. Dafoe, of the Manitoba Free Press, stated in effect that if the problem of agricultural poverty could be solved, it would solve many other problems.

Minser is doing excellent work in investigating the costs of production of dairy products, but he cautions that the marketing problem for all of anyone's importance," is "our opinion," Mr. Williams added, "that it would be an exact step if the government were suggest to the university authority an investigation into marketing march with a view to establishing an economic basis for agriculture."

**Landmarks Are Just
Used As Background**

Realists Like To Be Main Figure In
Snapshots

The most photographed landmark in Paris is the tourist. Occasionally the Eiffel Tower and the Arc de Triumpha and the Place de l'Opera are the main figure in the picture. Each Parisian has his own

is true it is a plain case of bad timing, for they were intended to be in the background, with Mr., Miss or Aunt Tourist in the foreground. Developing films for the street trade reveals many things.

ing them this fact: The traveller
to photograph nothing better
himself. A picture of the Made-

is all very well as a souvenir, that church takes a golden hue. Mr. Tourist can persuade some to "snap" it while he stands on steps. That puts "real touch" to it and makes ultimate display of the action a real pleasure.

Stone-Eating Microbes

Buildings As Other Germs Destroy Human Bodies

London botanist, Dr. Buchanan, discovered microbes which feed on stone. The germs have been artificially cultured and are of various kinds. They attack stone castles, statues, and monuments, and in buildings as other germs do in human body. Having found the disease it is surmised that it may be
